

Don't let wet roads slow down your paving job anymore.

Unlike any other machine the Road Dryer 1200 preconditions the drying air to remove the moisture prior to the air hitting the road. This allows faster drying time to get your crews on the job after a morning dew or passing rain storm. The Road Dryer 1200 will not harm the asphalt as the drying air does not exceed 300° F.

- Dry road at 25 to 50 FPM (feet per minute) up to twelve feet wide.
- Drying nozzle is adjustable to three drying widths 8', 10' and 12'
- Diesel powered - max fuel consumption approx. 15gph (gallons per hour).
- Fully self contained machine.
- Tow behind a small tractor or pickup truck.
- Machine is approx 23 feet long 8 feet wide and weighs approximately 7000 lbs.
