

Rail Mount LED Work Light - Dual 40 Watt Adjustable Light Heads - 120-277VAC - Ladder/Scaffold MountPart #: [WAL-JH-2XWP400](#)**Made in the USA**

The WAL-JH-2XWP400 rail mount LED work area light fixture from Magnalight produces 2,924 lumens of light capable of illuminating an area 15,000+ square feet in size. Weather proof and IP68 rated waterproof, this powerful LED fixture comes attached to an aluminum rail/ladder mount bracket that allows operators to easily mount this unit to ladders, handrails, catwalks and other similar structures.

The versatile WAL-JH-2XWP400 bracket mounted LED work area light from Magnalight is ETL approved for wet locations and comes with an adjustable aluminum ladder/bracket mount that makes it ideal for use in industrial applications, maintenance, cleaning and servicing duties, large open space work areas, and any area where ladders, scaffolding and other railings provide opportunities for mounting. This unit produces 2,924 lumens of high intensity light and includes a 25 foot cord for easy connection to standard 110-277 VAC power sources.

The aluminum rail/ladder bracket can be adjusted from 26 inches to 43 inches to allow mounting to a wide variety of railings, scaffoldings or ladders, and includes an adjustable center pole that allows operators to raise the light 3 feet above the bracket.

[Click Photo to Enlarge](#)

These scaffold mount lights come in a standard floodlight configuration to provide more light over a larger area nearer the fixture, making them ideal for use as dedicated work and area lights. These units produce 2,924 lumens, and will illuminate an area 15,000+ square feet in size. The LED heads on these units are independently adjustable, with 180° of tilt and 360° of rotation, allowing optimal beam placement. Each LED light is ruggedly constructed to withstand the most demanding work environments, conditions, and applications and ETL approved for wet locations.

Mounting: The lightweight aluminum ladder bracket with adjustable J-hook bottom allows operators to securely mount the light to any rail, ladder or scaffolding. The J-bracket can be adjusted 26 inches to 43 inches to allow mounting to ladders, scaffolds and similar structures of various sizes. The center mount pole is adjustable and can be elevated to three feet above the mounting bracket, helping to improve coverage and reduce glare. These units are extremely durable and resistant to damage from shocks and vibrations, and are ideal replacements for fragile and hot running 400 watt metal halide area lights as they are cooler running, use less power, and produce comparable light output.

Voltage: These scaffold/ladder mounted LED work lights include 25 foot cord and straight blade plug for easy connection to standard 110-277 Volts AC power sources. Optional low voltage 12-24 Volt DC lights are available, allowing operators to power the light from batteries, heavy equipment, or vehicles when standard AC power is unavailable or inconvenient.

Suggested applications: catwalks, ship rails, ladders etc. making this light useful in ship yards, boat yards, plants, tanks, vessels, barge repair and new construction applications.

Please contact us at sales@magnalight.com or 1-800-369-6671 for custom configurations with this ladder/rail mounting option. For example, we offer 2 light configurations and solutions with one or two explosion proof Class 1, Division 1 lights.
