IT'S LIKE YOU'RE THERE

INPAVE

New InPave™ Technology Monitors & Simplifies Pothole Patching Management For Bergkamp's Flameless Pothole Patcher

Don't just fill potholes, manage them. Bergkamp's new InPave™ System allows you to quickly verify your patcher's functions and crew performance and evaluate how they affect your overall pavement management plan. With its assistance, you can answer your 'when', 'where' and 'how much' questions at all times and adjust your patching action plan accordingly.

You can trust the results. Bergkamp has been the leader in pothole patching innovation for 10+ years, offering the first safe flameless heating technology and patented Swing Auger System that have revolutionized the patching business. The InPave System is field proven and ready to work on new and current Bergkamp Flameless Pothole Patchers.

InPave Delivers Piece Of Mind

- *Track & Evaluate Crew & Patcher Performance*
- *Map All Pothole Repairs*
- *Troubleshoot Patching Inefficiencies*
- *Maximize Road Quality & Budget Use*
- *Optimize Pavement Management Planning*

Advancing Technology Without The Headache

The InPave™ System was designed to be simple. You patch like you always do, it collects the information. There is no software to download. Multiple data reporting sensors located throughout the patcher work when you work without interrupting the patching process. The data can then be retrieved by you from any computer with reliable internet access, so you can easily evaluate the selected performance and/or production results and use them as you please.

Bergkamp provides one year of free cellular data transmission service that allows for quick, reliable downloading of information. Moving forward, you can continue with this service or easily transition to a radio receiver system. You pick the method that works best for your needs and budget.

You Control The Level Of Detail

1. *Standard Reports* – Choose standard reports that show things like patch location, amount of material used or the type of material placed for your everyday evaluation.
2. *Detailed Reports* – Or, create custom reports built around your overall or single-event needs.

What about your current pavement management system? It is compatible. Our experts can show you how to export data from the InPave System and load it into your current system.

One System Monitors Your Entire Operation:

- Material source
- Asphalt material type
- Hopper asphalt material level
- Asphalt temperature
- Tack coat material type
- Tack coat temperature
- Heater status (on/off)
- Operator log in/log out
- And more...

A Seamless Process

1. PATCH & COLLECT DATA

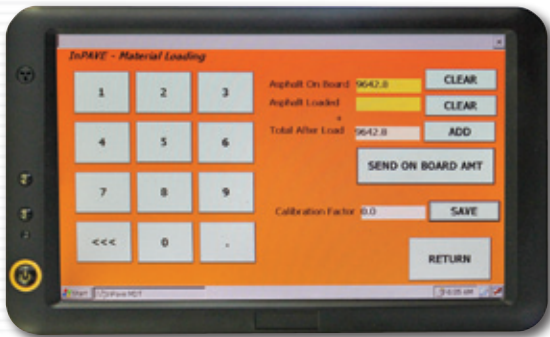

2. EVALUATE RESULTS

3. INSTANT REPORTING

Operator Friendly, Results Oriented

Technology is only as effective as the operator using it. That is why we designed the InPave System with the operator in mind.

- An in-cab, 7-inch color touch screen mobile data terminal provides everything they need in one location.
- When filling at the asphalt plant, the operator only needs to enter the quantity of material loaded.
- From there, operators do what they do best—repair potholes.
- At any time, they can view material data that may help them, including material levels and temperatures.

The data is gathered as they patch and automatically sent back to the office. Simple, quick and accurate!

Experienced Training & Support

Bergkamp's dedicated team of InPave System experts will assist you with all initial training and setup. The process of tailoring it to your specific reporting needs and educating your operators takes very little time. If you encounter any unexpected challenges after the initial training, we are only a phone call away.

Let us show you how the InPave System can improve your pothole patching performance. Ask for a free demonstration today!

BERGKAMP

PAVEMENT PRESERVATION SOLUTIONS

Providing Pavement Preservation Solutions Worldwide

Bergkamp Inc. has been an expert in pavement maintenance equipment for more than 35 years, and works with customers throughout the world. The company's success continues to grow through hands-on knowledge of the industry and its products, and the company's dedication to customer support.

Bergkamp is the only manufacturer to produce a full-size continuous slurry seal and micro surfacing paver. It also designs and manufactures a full line of truck- and trailer-mounted slurry seal and micro surfacing pavers and equipment, along with truck-mounted flameless pothole patchers.

Contact Bergkamp today to find cost-effective solutions for extending the life of highways, roads and parking lots.
