GREASE JOINT REJUVENATOR®

Have you ever tried to push grease thru a grease fitting and couldn't?

NOW YOU CAN!

The problem is the fitting, not the joint.

- Loosens hardened grease in joints
- Cleans, replenishes & maintains old, dirty grease fittings
- Cleans closed bearings on farm, lawn & construction equipment

Don't change it, clean it.

Provides a quicker and better option than fishing wire thru, heating, or disassembling the joint.

HOW IT WORKS: Remove the piston and fill the tool with penetrating oil. Place the end of the tool on the grease fitting and tap the piston head with a hammer until it starts to move down into the tool body. The hydraulic pressure created by tapping on the piston forces the penetrating oil into the grease fitting as well as cleaning out the entire joint. Now you can load the fitting and joint with new grease.

GREASE JOINT REJUVENATOR® PROFESSIONAL MODEL
