

FieldConnect

| FieldTime

FieldConnect's FieldTime is a mobile timecard application that creates a sophisticated, streamlined time-entry and payroll approval workflow. FieldTime integrates seamlessly with your existing accounting and payroll solution, updating data in the back office in real time, and ensuring absolutely accurate payroll.

- **Eliminate paper:** Avoid the hassle of entering payroll info from paper timecards.
- **Maximize billable hours:** Fewer trips to the shop and a reduction in paperwork means more jobs completed and more hours billed.
- **Eliminate manual clock-in/out process:** Real-time GPS tracking allows you to know when and where an employee begins a job and eliminates rounding.

Companies implementing FieldTime as part of a workforce mobilization solution:

- Have absolutely accountable payroll, done more quickly with fewer errors and less delay
- Eliminate rounding of time
- Know with certainty that they are paying for work hours only
- Have employees who are confident they are being fairly paid

"With manual timecards, an average of an hour a day per technician was being added by rounding. FieldConnect is saving us around \$4400 per week just by eliminating rounding and the time it took for our managers to reconcile timecards and work order numbers."

- Chat Goben, Service Manager, KDC Construction

I FieldTime Features

Provides a single integrated time capture system: Time is updated in payroll module instantly throughout the day

Summary view: Easily see the time entered for selected time period

Detailed view: See individual time entries per day and per work order

Reconciliation: Address any differences between actual billed time and time technician is to be paid for, on a daily basis

Supervisor approval and editing of time: Allows a supervisor to add or edit labor lines in a timecard view as well as add, remove, and/or approve vacation, sick, and other unapplied time

GPS tracking of submitted time: Know where your employees are when they clock in or out for the day

Payroll batch editing: Supervisors can edit batches in a timecard view AFTER submissions have been moved to payroll

Technician accountability: Back office does not spend time resolving time/pay discrepancies

Seamless Integration

FieldTime has a proprietary link to Microsoft Dynamics (AX, GP, SL, and NAV), Sage 300 Construction & Real Estate or Sage 300 Trade Specialty (formerly Sage Timberline), and Viewpoint Construction Software Viewpoint V6 software to facilitate fast and secure real-time communications between your field technicians and the service management database.
