## IntelliSkin™ protects your device charging port using GDS™ Technology

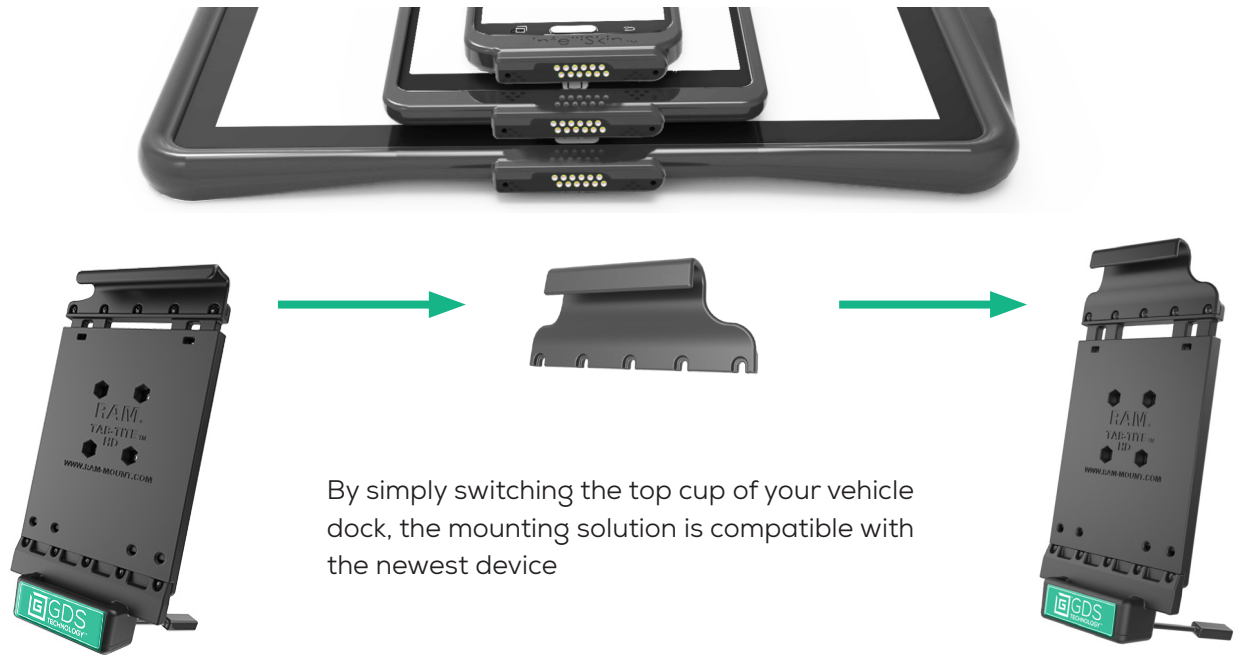

IntelliSkin™ protects your equipment by wrapping your device in a durable polyurethane sleeve with an integrated GDS™ connector.

The IntelliSkin™ integrates your device connector directly into the skin. This prevents damage to the connector on your device and enables repetitious docking.

# Scalability

The universal GDS™ connector allows for scalability to the latest device with a low cost for upgrading.

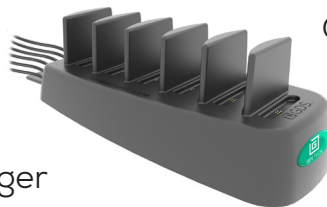

By simply switching the top cup of your vehicle dock, the mounting solution is compatible with the newest device
