For over 100 years, customers have depended on MTU engines for exceptional power and performance. We're focused on off-highway diesel engines, and ready to help you meet your specific requirements. With a passion for performance and reliability, MTU offers first-class service and a tradition of excellence to customers all over the world. We provide a complete product lineup to cover a wide power range (30 kW to 10,000 kW) for diverse applications such as construction and industrial, agriculture, mining, oil and gas, marine, rail and defense. Since our founding, MTU has set standards in technology, innovation and customized products and systems solutions. We offer a full line of solutions for every need.

Robust, compact and fuel-efficient engines are available in every power

category. MTU Series 1000 through Series 1600 engines are available now with Tier 4 final certification up to 979 bhp (730 kW). Best of all, they all meet EPA Tier 4 standards without the need for diesel particulate filters.

Covering a power range of 760-1,560 bhp (567-1,163 kW), the redesigned MTU Series 2000 diesel engine is ready for EPA Tier 4 interim standards today, and the same engine platform will meet Tier 4 final standards beginning in 2015. The new Series 2000 features improved fuel economy and a compact and efficient design. It joins a complete lineup of Tier 4 ready engines from MTU.

We back our products with exceptional service. From maintenance to spare parts to engine overhauls, MTU offers full support through MTU **ValueCare**. These products and services are designed for peak performance and maximum uptime. MTU **ValueCare** is always nearby—available worldwide through the MTU service network.
